### Working out spray and speed quantities

Area of farm to be covered	ha	(A)
Vehicle speed (tractor / atv / 4WD)	kph	
Distance covered in 40 minutes	metres	

Area covered in 40 minutes = distance in metres \_\_\_\_\_ x \_\_\_\_\_ spray width (15m) = \_\_\_\_\_ m<sup>2</sup>

\_\_\_\_\_ m<sup>2</sup> divided by 10,000 = \_\_\_\_\_ hectares per load (B) \_\_\_\_\_ hectares x 34 litres = \_\_\_\_\_ litres per load / stir (C)

Required spray pump capacity = (C) divided by 40 minutes = \_\_\_\_\_ litres per minute flow rate

Vehicle tank size: \_\_\_\_\_ litres. Number of loads (A) divided by (B) = \_\_\_\_\_ Flowform / stirring machine size / type: litre capacity per hour = \_\_\_\_\_
